

Questionnaire

To get some idea of the composition of the class, I'd like you to fill out the following questionnaire. Turn them in Thursday, April 12.

1. [Optional] Your name
2. What is your major?
3. Do you know any group theory at the beginning of the course?
4. Do you know how to solve the cube?
5. Have you been able to access the notes?
6. Did you print the notes out or do you read them on the computer screen?
7. What are your goals in this class?
8. Last year several students presented material in class, and these were well liked. A typical topic was proving that it is impossible to flip a single edge without flipping another one also. Are you interested in doing this?
